

map&guide fleet navigator 5

Mobile Navigation for your Vehicle Fleet

The brand map&guide, a pioneer in mobile navigation, was developed specifically for businesses. map&guide fleet navigator is a highly efficient solution for companies with internal vehicle fleets. The software does not only efficiently navigate your drivers to their destinations in the whole of Europe; when connected to your internal company system the map&guide fleet navigator becomes the ideal tool for your fleet control.

Prize winner!

Winner of the 2008 TeleTraffic reader's poll: map&guide truck navigator

Basic Functions

Mobile navigation is a popular alternative to expensive fixed installations. map&guide truck navigator offers:

- Door-to-door cross-border navigation
- Intuitive, easy operation
- Precise visual cues and spoken instructions
- 2D and 3D navigation using map&guide's clear, intuitive maps
- Proven, professional map&guide routing and navigation
- Extrapolated positioning in tunnels
- Dynamic navigation: The latest TMC information is received on a TMC receiver free of charge and used to update the route while on the road.
- map&guide fleet navigator supports the following languages: English, German, French, Dutch, Italian, Spanish, Portuguese, Danish, Norwegian, Swedish, Polish, Czech, Slovak, Slovenian, Hungarian, Romanian, Turkish, Russian, Bulgarian
- **New:** Speed limit warnings for cars in many countries
- **New:** Auto Smartzoom enlarges map view when approaching manoeuvres
- **New:** Incorporates directional information on highway signs
- **New:** Automatically switches between day and night view

Connected navigation

With map&guide fleet navigator it is possible to control the navigation of your service employees' cars from your control center: Order files (RC-Interface) and interfaces in C and C# (RI-Interface) enable communication between map&guide fleet navigator and a secondary software which establishes communication with the control center. These functions can be used to:

- Send one or more stop-off points to the navigation system right from headquarters
- Retrieve GPS positions from the navigation system and share them with third-party applications
- Start and stop mobile navigation
- Send messages to the navigation system and display them there
- **New:** The control center can read and reset vehicle profiles, for example from van to car

One fleet - different vehicle profiles

Take advantage of the possibility of creating suitable vehicle profiles for your fleet - ensuring the most suitable navigation for your vehicles. With map&guide fleet navigator the following criteria and more can be taken into account when creating vehicle profiles for cars and trucks:

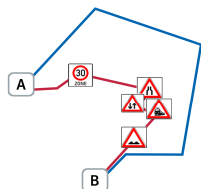

- Speed profile
- Avoiding motorways and ferries
- For cars: optimization of route, economic, time
- For trucks: avoiding smaller roads (by-passes)

Truck-specific routing

Normal navigation systems are designed for cars, but truck drivers have different needs:

- Troublesome side streets are avoided to provide the kind of navigation trucks need.
- The map&guide fleet navigator automatically avoids housing areas when trucks are selected as vehicle type. The truck enters the residential area at the very last moment before reaching its destination.
- **New:** Drivers can decide how often to avoid side streets and city through roads. They simply choose from different routing profiles.
- **New:** Turning manoeuvres are avoided on roads which do not have separated lanes.
- **New:** The navigation system knows when destinations and starting points are in restricted areas such as pedestrian zones or factory grounds. Even then, it will safely guide you to your destination.

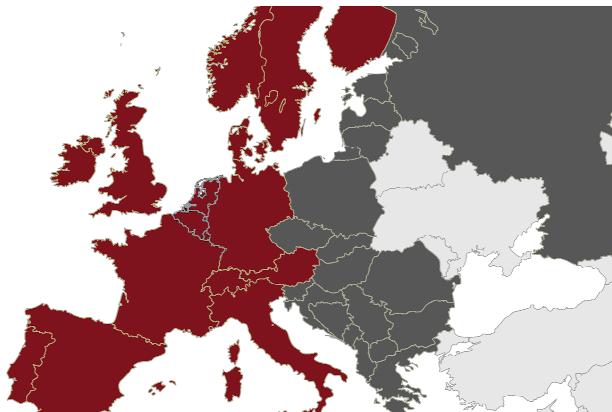

Available Maps

- DACH City (Germany, Switzerland, Austria, Liechtenstein)
- Europe map package

Available map detailing

- Detailed network: The best road network with detailed coverage ("city")
- Major roads network: Overland network with the most important main roads (or better)
